

ENVIRONMENTAL POLICY

S.J. Burke & Company Limited are committed to providing a quality service in a manner that ensures a safe and healthy workplace for our employees and minimises our potential impact on the environment. We will operate in compliance with all relevant environmental legislation and we will strive to use pollution prevention and environmental best practices in all we do.

We will: -

- Integrate the consideration of environmental concerns and impacts into all of our decision making and activities throughout our business.
- Train and promote environmental awareness among our employees and motivate them to work in an environmentally responsible manner.
- Work in conjunction with our clients and their environmental management systems.
- Communicate our environmental commitment to clients, customers, external providers who may impact on our service and the public and encourage them to support it.
- Follow our best environmental hierarchy in respective order by process of eliminating, reducing, reusing, recycling, recovering energy and segregated disposal.
- Ensure the implementation of legislation relevant to the handling of lubricants, oils and antifreeze products and the disposal of waste by products from same.
- Advise customers on best practice use of our products which will in turn reduce the environmental impact of their services by making their equipment run more efficiently and lengthen the life span of equipment and reduce service costs and waste component disposal.
- Promote efficient use of materials and resources throughout our facility including electricity, raw materials and other resources, particularly those that are non-renewable and thus reduce our business carbon footprint.
- Avoid unnecessary use of hazardous materials and products, seek substitutions when feasible, and take all reasonable steps to protect human health and the environment when such materials must be used, stored and disposed of.
- Purchase and use environmentally responsible products accordingly and encourage our suppliers to implement environmental aware programmes of operation.
- Where required by legislation or where significant health, safety or environmental hazards exist, develop and maintain appropriate emergency response programmes.
- Implement effective programmes to monitor current compliance and evaluate change in environmental legislation, practices or our own production practices and materials which may impact on that compliance and effectively manage the change.
- Strive to continually improve our environmental performance and minimise the social impact and damage of activities by periodically reviewing our environmental policy whilst taking into consideration current and planned future activities.
